

ENISCOPE®

PROFESSIONAL REAL-TIME ENERGY MONITORING

globally recognized

DELIVERING UP TO 43% SAVINGS

Powering Smarter Decisions Every Second

Instant insights to help you take control of your energy consumption.

A COMPLETE SYSTEM

Stage 1

How can you control, reduce and eliminate your 'invisible' energy waste?

Energy is invisible in use, so it's easy to waste it. With Eniscope, your energy use is visible - making it to save!

Building

Department

Circuit

Equipment

The hardware element of an Eniscope System starts with Advanced Metering to accurately capture your critical energy data... whether at building, department, circuit or equipment level. This information is collected in real-time by the Data Gathering component of the system and delivered locally and over the web via a stunning range of real-time energy displays. Our results testify that seeing your live energy consumption disaggregated into its key components empowers you to cut your costs and reduce your carbon footprint.

*Eniscope reads, records and displays information from any connected pulse meters

Key Benefits:

ACCURATE

Class 0.2 metering can monitor up to 8 three-phase channels per unit

CENTRAL CONTROL

Monitor Electricity, Gas* & Water*... Everything you need in one convenient location

WEB-BASED

No software required. Use any web-browser from any location

SCALABLE

Add more meters or new Eniscope compatible devices at your

PLUG & PLAY

Simple installation supported by free remote upgrades

REAL-TIME MONITORING

Stage 2

How can you be sure which strategies are working best?

Working out where you've wasted energy from a monthly bill is impossible! Eniscope's real-time data puts a stop to energy waste

Eniscope Real-time does what a utility bill can't... it shows you exactly where your energy is going, second by second. Make a change and it will reveal the immediate effect... for better or for worse. The information is displayed in a language you will understand, be it kW's, Cost or Carbon. Now you can monitor individual pieces of equipment, isolate energy leaks, expose energy abusers and even check the effectiveness of energy saving products... all in real-time.

* SMS alerts are the responsibility of the end user and will require the purchase of a separate email to SMS service from a local provider. Each SMS will be charged at the current rate agreed by you and your service provider.

Key Benefits:

FASTER

Genuine real-time performance delivers real-time savings

ALERTS

Email & SMS* alerts prevent excessive use and supply penalties

VERIFICATION

Use it to check the claims of energy saving products & equipment

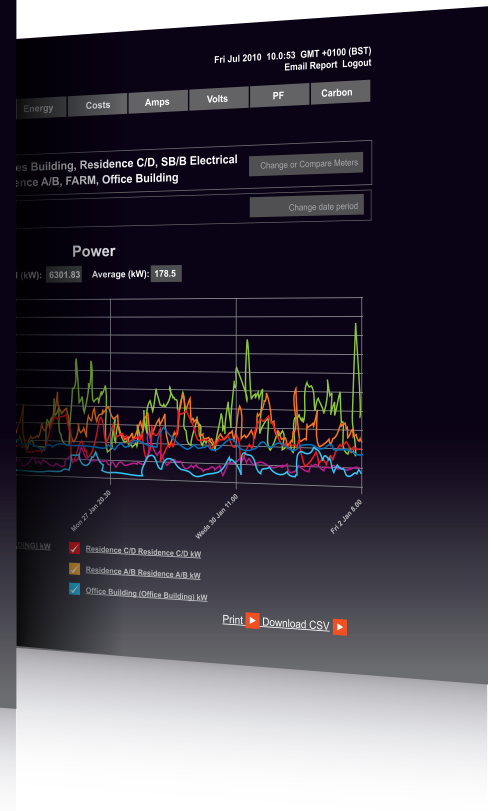

POWER TRENDS

Real-time graphing reveals your pattern of consumption

MOBILE

Check your performance on the move with our smart phone app

ENERGY ANALYTICS

Stage 3

How can you calculate how much energy, money and carbon you are saving?

All the information you need in an easy to understand format... your virtual energy manager, available 24 hours a day.

Eniscope Analytics is a web-based, energy diagnostics tool that gives you rich insights into your 'historical' energy consumption and the health of your power supply. Intelligent, flexible & easy to use... making energy information highly accessible and simple to understand.

Using your favorite web browser, you can do a detailed energy analysis on any equipment, in any building, in any country, at any time... and all from the comfort of your PC or mobile device.

Key Benefits:

COMPARE

See numerous meters on the same performance chart

ITEMIZE

View consumption by building, department, circuit or machine

PLAN

Cost tracking in any currency with spending forecasts

PREVENTION

Monitor power quality to avoid maintenance & safety issues

REPORTS

Daily email reports show improvements and expose weaknesses

PUBLIC DISPLAY

Stage 4

How can you demonstrate your corporate commitment to energy conservation?

Creating awareness through beautifully designed displays... saving energy has never been this easy or **looked this good**

An Eniscope System can also power a range of stunning Real-time Energy Displays. These displays can be strategically positioned around your building to create awareness among the occupants as to how energy is being used and provide the incentive to change their behaviour because the benefits can be seen in real-time. Displays can include features like league tables, which promote competition between staff members or between sites in a multi-site estate.

Eniscope Case Study

Eniscope at Nando's

Nando's have rolled Eniscope out across every one of their restaurants in India, with a view to changing the wasteful behaviour of their staff. Using no further energy saving technologies, but a strong program of awareness and incentives - they are saving on average 21.20% per store. Rising to 38.7% in the best store! That's the power of staff engagement.

RENEWABLE ENERGY

Stage 5

How can you showcase your renewable energy solutions?

Demonstrate the effectiveness of alternative power generation... your corporate commitment to a greener planet

The hardware element of an Eniscope System starts with Advanced Metering to accurately capture your critical energy data... whether at building, department, circuit or equipment level. This information is collected in real-time by the Data Gathering component of the system and delivered locally and over the web via a stunning range of real-time energy displays. Our results testify that seeing your live energy consumption disaggregated into its key components empowers you to cut your costs and reduce your carbon footprint.

*Eniscope reads, records and displays information from any connected pulse meters
